

INSUPEN INSULIN PEN NEEDLES

A REVOLUTIONARY COMFORT IN INSULIN INJECTION

The new Extr3me geometry offers a sharper bevel than the traditional needles, thus minimizing pain as less material penetrates the skin. Available in gauges of 33G, 32G and 31G.

Insupen pen needles are now equipped with the Super Thin Wall technology. With this new technology, the internal diameter significantly increases the insulin administration time by improving the medication flow. Always conform to security requirements, the Super Thin Wall technology is available in 33Gx4mm and 32Gx4mm.
